

FLEXIBLE  
**LASER PRINTER**  
SOLUTIONS

# Flexible laser printer

## State-of-the-art printing

The high performance laser printer for QR, human readable coding and serialisation can be customised to apply codes on several surface types. The innovative bottom printing principle enables state-of-the-art prints at high speed and

combined with hygienic design the printer solution is perfect for use in the infant formula, food, pet food and pharmaceutical industries.

High-end vision and reject system with in-line process control ensures a reliable and validated coding quality.

### Flexible design

A versatile and modular design allows for installation of laser printers of various makes with printing from either top or bottom.

The safety validated design can accommodate CO<sub>2</sub> and/or fiber lasers, using the best from both types.

### High quality print

This latest generation laser printer is designed to deliver perfect prints, low false rejection rate and high production efficiency.

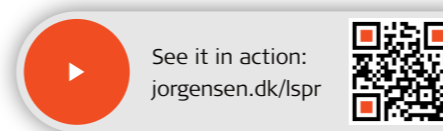

High quality printing is achieved through an intelligent and vibration-free design principle.

### Easy operation

A robust industrial design provides a high performance solution with low maintenance requirements.

An innovative printing principle combined with a practical rack system allows for user-friendly operation, easy cleaning and access to all parts.

High-end printing with a compact footprint.

Multiple types of lasers can be mounted on a retractable rack system allowing for great versatility and easy operation.
